# Md Hammad Neyaz

Front-End REACT Developer

+91 7870321003 · mdhammadneyaz@gmail.com · Gurugram, India

## PROFESSIONAL SUMMARY

Creative and results-driven Lead Web Developer with deep expertise in front-end technologies and the full web development lifecycle. Skilled in building dynamic, user-centric web applications with high performance and responsive design. Passionate about clean code, modern frameworks, and transforming ideas into impactful digital experiences.

## KEY COMPETENCIES

- HTML Development
- CSS Style Sheet/Bootstrap
- JavaScript programming
- React.js
- Front-end frameworks
- WordPress
- Project management
- Time management

## EXPERIENCE

**Revenue7 Inc, Lucknow (Remote)**                                    **May 2025 - Till Date**
**Web Developer**

- Worked closely with UX/UI designers to turn visual designs into functional and responsive web pages.
- Maintained and updated existing websites to improve performance, fix bugs, and enhance user experience.
- Developed user interfaces using HTML, CSS, and JavaScript, ensuring clean layout and mobile responsiveness.
- Assisted in managing and customizing WordPress websites, including theme editing and plugin configuration.

**Bootcamp at Sharda University, Greater Noida**                     **June 2024- August 2024**
**MERN Stack**

- Designed and developed responsive user interfaces with a focus on modern UI/UX practices using React.
- Created interactive, mobile-friendly web pages that provide a seamless user experience across devices.
- Integrated front-end components with back-end
- services to build dynamic and functional web applications.
- Built and tested full-stack web applications using React (front end) and Node.js/Express (back end).
- Used tools like Git, VS Code, and cursor for version control and debugging.
- Followed best coding practices, wrote clean and maintainable code, and collaborated in a project based environment.

**PROJECTS**
## Smart Gas Leakage Monitoring System (Patented)

- Designed and patented an IoT-based gas leakage monitoring system using Arduino sensors and real-time alerting.
- Built hardware + software integration with GSM modules for emergency notification.
- System significantly reduces response time to hazardous gas leaks.

## Smart Group Travel System: Dynamic Matching and Planning(Published at IEE (ICCTDC))

- Designed and developed a mobile application that intelligently matches users for group travel based on preferences using AI/ML.
- Created UI/UX in Figma; implemented front-end using React Native and back-end using Node.js and MongoDB.

## Myntra Clone

- Built a responsive e-commerce web application replicating core Myntra features using React, HTML, and Bootstrap.
- Implemented product listings, category filtering, and dynamic routing with React Router.
- Designed modern, mobile-first UI/UX using Bootstrap components and custom CSS.

---

## EDUCATION

**Diploma (Computer Science & Engineering)**

Maharshi University, Lucknow

**B. Tech (Computer Science & Engineering)**

Sharda University, Greater Noida
